

DESERT

- ✘ *A Hot and Dry Desert is, as you can tell from the name, hot and dry. Most Hot and Dry, and they are dangerous.*

LOCALITION:

- ✘ The desert is important because it covers about a fifth of the earth's surface! There are both hot and cold deserts. Antarctica is the largest desert in the world, while the Sahara in Africa is the largest of the hot deserts. In North America, there are four major hot, dry deserts, including the Mojave and the Great Basin.

PLANTS:

- ✘ *Deserts don't have very many plants. They do have some low down plants though.*

ANIMALS:

- ✘ Deserts are a very important biome. Mostly because of all the plants and animals that call the desert "home". Some animals that live in the hot desert are cold-blooded, like snakes, insects, and lizards. Mammals that live in the desert are usually small, such as the kangaroo rat and kit fox. In the Eritrean coastal desert in Djibouti, Africa, animals like gazelles, skinks, geckos and dikdiks roam the desert.
